

Serial No. 10/084,381  
Supplemental Amendment dated May 19, 2004  
In Reply to Office Action dated January 15, 2004

**Amendment to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims**

Claims 1-6 (cancelled).

Claim 7 (previously presented). A method of producing an embossing roller having an embossing surface made of silicone rubber for continuously embossing the surface of a thermoplastic film, the embossing surface having a negative form of a to-be-embossed surface structure:

a) first an auxiliary roller is produced, which is comprised of a layer of a material at least in the region of its circumferential surface;

b) the circumferential surface being smooth;

c) a laser beam being directed at the circumferential surface;

d) the laser beam moving relative to the circumferential surface, and being controlled in accordance with a respective surface structure site of a real or imaginary pattern - present as data - such that the pattern surface structure is produced as a positive structure in the circumferential surface of the auxiliary roller;

Serial No. 10/084,381

Supplemental Amendment dated May 19, 2004

In Reply to Office Action dated January 15, 2004

e) the embossing copy being removed from the circumferential surface of the auxiliary roller, being turned inside out, and with the negative-structured embossing surface facing outwardly and being adhered to a circumferential surface of an embossing roller; and

f) the material in the region of the circumferential surface of the auxiliary roller being nitrilbutadiene rubber (NBR).

Claim 8 (previously presented). Method according to claim 7, wherein:

a) the embossing surface having a negative form of a to-be-embossed surface structure includes a grain.
